

## 12 BASIC PHP STRING FUNCTIONS:

- Getting length of a String : `strlen(string);`
- Counting of the number of words in a String: `str_word_count(string);`
- Reversing a String: `strrev(string);`
- Finding Text Within a String: `strpos(string,text);`
- Replacing text within a string: `str_replace(string to be replaced,text,string);`
- Converting lowercase into Title Case: `ucwords();`
- Converting string into UPPERCASE: `strtoupper();`
- Converting String to lowercase: `strtolower();`
- Repeating a String: `str_repeat(string,repeat)`
- Comparing Strings: `strcmp(s1,s2);`
- Displaying part of string: `substr(str,start,len)`
- Removing white spaces from string: `trim(str,charlist)`
